

Hybrid Inheretence

package interfaces;

```
interface I1 {  
    void ex();  
}
```

```
interface I2 {  
    void in();  
}
```

```
interface I3 extends I1, I2 {  
    void lee();  
}
```

```
class Raw implements I3 {  
    public void ex() {  
        System.out.println("this is from I1");  
    }  
  
    public void in() {  
        System.out.println("this is from I2");  
    }  
  
    public void lee() {  
        System.out.println("this is from I3");  
    }  
}
```

```

class Child extends Raw {
    void display() {
        System.out.println("this is from Child");
    }
}

```

```

public class Hybrid {
    public static void main(String[] args) {
        Child a = new Child();
        a.ex();
        a.in();
        a.lee();
        a.display();
    }
}

```

Output:

```

+-----+
|  I1  |
+-----+
| + ex() : void  |
+-----+
\
\
\
v
+-----+
|  I3  |

```
